

Amanuensis V1.5.2 instructions

(last review: 15 March 2015)

1 Purpose

Amanuensis is a utility for searching within the database of Latin sources pertaining to Roman Law created by the University of Linz ("Romtext"). By courtesy of Hofrat Dr. Josef Menner, the copyright holder of Romtext, Amanuensis includes the complete Romtext database. Amanuensis is available in different versions for both Windows and Mac computers. Further, there is also an iOS version. The permanent URL of Amanuensis is www.riedlberger.de/amanuensis. Check back regularly for updates.

2 License

Amanuensis itself is freeware. You can use it for free (even in commercial contexts). You can also pass it on for free. However, you must in this case always clearly state the authors' names. And remember, there is no warranty or liability whatsoever. The license is "Creative Commons Attribution-NoDerivatives 4.0 International Public License."

Note that the Windows Amanuensis version includes some open source code with different licenses, namely:

- The Code Project Open License 1.02 (www.codeproject.com/info/cpol10.aspx)
 - *A Pretty Good Splash Screen in C#* by Tom Clement (www.codeproject.com/Articles/5454/A-Pretty-Good-Splash-Screen-in-C)
- GNU Lesser General Public License (<http://opensource.org/licenses/lgpl-3.0.html>)
 - *Fast Colored TextBox for Syntax Highlighting* by Pavel Torgashov (www.codeproject.com/Articles/161871/Fast-Colored-TextBox-for-syntax-highlighting)
 - *gettext-cs-utils* by Manas Technology Solutions (<http://code.google.com/p/gettext-cs-utils>)

Further, Windows Amanuensis ships with two free monospaced typefaces (polytonic Greek looks simply awful when displayed using Courier New):

- DejaVu Sans Mono (<http://sourceforge.net/projects/dejavu>)
- Ubuntu Monospace (<http://font.ubuntu.com>)

3 Requirements for the Windows version

Basically, as a Windows user, you need three things. First, you need Microsoft .NET Framework 4.0. This is a piece of software provided by Microsoft without which Amanuensis cannot work. Don't worry: if your Windows installation does not include this software, installing Amanuensis will in many cases automatically prompt you to download and install it (otherwise, search for the program on the Microsoft website). Second, Amanuensis needs a whopping one gigabyte of free memory. That's a lot, we know, but your reward is incredibly fast searches. Third and finally, you need administrator privileges to install Amanuensis. This

is not a problem if it is your own computer. In an office environment, you might need to ask your administrator for help.

4 Installation

Windows version: if you double-click the Amanuensis installer, you might be prompted to download and install .NET Framework (in that case, do so!). Otherwise, simply follow the installer's instructions.

Mac version: download the file to your Mac computer. Mount it by double-clicking it. Then drag Amanuensis.app to your program directory.

5 A few notes on Romtext

The creation of Romtext started back in 1970, at that time by means of punchcards! Around 100,000 of these cards were necessary to input just the Digests, and this took no fewer than five years. Back then, there was one mainframe running the Romtext database based at Linz University, and researchers in the field of Roman Law could send their queries by snail mail to Linz. Romtext includes the following texts:

a) Corpus Iuris Civilis

- Iustiniani Institutiones (I.) - P. Krüger, 16. ed. Berlin
- Iustiniani Digesta (D.) - Th. Mommsen, Voll. I,II, Berlin 1870
- Codex Iustinianus (C.) - P. Krüger, 16. ed. Berlin
- Constitutio Deo Auctore (Const. Deo Auctore) - P. Krüger, 16. ed. Berlin
- Constitutio Tanta (Const. Tanta) - P. Krüger, 16. ed. Berlin
- Constitutio Omnem (Const. Omnem) - P. Krüger, 16. ed. Berlin
- Constitutio Imperatoriam (Const. Imperatoriam) - P. Krüger, 16. ed. Berlin

b) Codex Theodosianus

- Codex Theodosianus (CTh.)
- Novels of C. Th. (Nov. Teodos., Nov. Val., Nov. Maior., Nov. Marc., Nov. Sev., Nov. Anthem.)
- Constitutiones Sirmondianae (Const. Sirm.)

c) Germanic Law Codes

- Lex Romana Burgundionum (Lex Rom. Burg.)
- Edictum Theodorici Regis (Edict. Theodor.)
- Breviarium Alaricianum (Brev. Alar.)

d) Various pre-Justinianic juristic texts

- Gaii Institutiones (Gai.) - Leiden 1964
- Sententiae Pauli (Paul.) - FIRA II
- Pauli Sententiarum Interpretatio (Interpr. Paul. sent.)
- Fragmenta Vaticana (Vat. fr.) - FIRA II
- Collatio legum Mos. et Rom (Coll.) - FIRA II
- Epitome Ulpiani (Epit. Ulp.) - F. Schulz, 1926
- Consultatio (Consult.) - FIRA II

- Gaius Augustodunensis (Gai. Aug.) - FIRA II
- Epitome Gai (Epit. Gai.)

e) Individual leges, senatus consulta, diplomas, municipal laws and similar

- Leges (Lex)
- Senatus consulta (SC)
- Senatus auctoritates
- Oratio Claudii
- Diploma
- Tabula Heracleensis
- Fragmentum Atestinum

The abbreviations such as “D.” are what you’ll see in Amanuensis when search results are displayed. You can also use them to jump to individual passages of interest (cf. below). Note that Romtext’s orthography may diverge from what you see in the editions.

If you knew the original Romtext database, you will remember that it used to be an all-caps database. The Romtext version included in Amanuensis provides capitalization. It was created by changing the Romtext database to all-lower case and then manually adding upper case where appropriate. Since this immense work (we are talking here about more than a quarter of a million text lines!) was carried by Hofrat Dr. Menner manually and all on his own, there might be some minor mistakes. You would help us and your fellow Amanuensis users a great deal if you could drop us an e-mail whenever you spot such a capitalization error: peter@riedlberger.de

As to Greek, Romtext only includes shorter passages of the kind you might occasionally encounter e.g. in the Digests; longer texts (longer Greek passages in CJ, const. dedoken, index Florentinus) have been left out on purpose. In contrast to the original Romtext database (which used a proprietary system to transliterate the Greek), Amanuensis displays all Greek texts using a polytonic Greek font.

6 Basic search

The following paragraphs will show you how to use Amanuensis in the most efficient way. It is recommended that you do exactly what we do in the examples. This is the quickest way to understand all the capabilities Amanuensis has to offer.

The screenshots are taken from the Windows version. The Mac user interface looks slightly different, but don’t worry: all the steps detailed below work exactly the same.

Let’s assume that you are interested in the lovely phrase “gladio ultore.” Just type

`gladio ultore`

into the search box and hit [return] (you can also click “Start Searching,” but I myself always use the [return] key).

Your result should look like this (cf. next page):

The screenshot shows the Amanuensis V1.4 search interface. The search bar contains the text "gladio ultore". Below the search bar, there are tabs for "Search results" and "Context". The search results section displays 7 instances found, each with a green highlight on the phrase "gladio ultore". The instances are:

- C. 1, 11, 1, 2 Constantius.**
Quod si quis aliquid forte huiusmodi perpetraverit, **gladio ultore** sternatur. facultates etiam perempti fisco decernimus vindicari et similiter puniri rectores provinciarum, si facinora vindicare neglexerint.
- C. 9, 9, 30, 0 Constantius et Constans AA. ad populum.**
Cum vir nubet in feminam, femina viros proiectione quid cupiat? ubi sexus perdidit locum, ubi scelus est id quod non proficit scire, ubi Venus mutatur in alteram formam, ubi amor quaeritur nec videtur: iubemus insurgere leges, armari iura **gladio ultore**, ut exquisitis poenis subdantur infames, qui sunt vel qui futuri sunt rei.
<a. 342 pp. Romae XVII k. Ian. Constantio III et Constante ii AA. cons.>
- C. 9, 18, 5, 0 Constantius A. ad populum.**
Nemo haruspicum consulat aut mathematicum, nemo hariolum, augurum et vatum prava confessio conticescat. chaldaei ac magi et ceteri, quos maleficos ob facinorum magnitudinem vulgus appellat, nec ad hanc partem aliquid moliantur. sileat omnibus perpetuo divinandi curiositas. etenim supplicium capitis feret **gladio ultore** prostratus, quicumque iussis obsequium denegaverit.
<a. 357 D. VIII k. Feb. Mediolani Constantio A. VIII et Iuliano C. II cons. >
- CTh. 9, 7, 3, 0. (342 Dec. 4). Constantius/Constans AA. ad populum.**
Cum vir nubet in feminam, femina viros proiectione quid cupiat, ubi sexus perdidit locum, ubi scelus est id, quod non proficit scire, ubi Venus mutatur in alteram formam, ubi amor quaeritur nec videtur, iubemus insurgere leges, armari iura **gladio ultore**, ut exquisitis poenis subdantur infames, qui sunt vel qui futuri sunt rei.
<Dat. prid. non. Dec. Mediolano, pp. Romae XVII kal. Ian. Constantio III et Constante II AA. cons.>
- CTh. 9, 16, 4. Constantius A. et Iulianus C. ad populum.**
Nemo haruspicum consulat aut mathematicum, nemo hariolum, augurum et vatum

At the bottom of the window, there is a copyright notice: © 2014 Günther Rosenbaum & Peter Riedlberger and a note: Romtext database by courtesy of Hofrat Dr. Josef Menner.

Note a few things:

- i) All the instances found are marked in green, which is quite useful for quickly skimming through them.
- ii) Note the numbering scheme. It is a feature of Romtext that a zero is displayed in the case of a principium or if there are no further paragraphs.

7 Refining the search: free positions

We've only found instances with "gladio ultore" in *exactly* this sequence and with *exactly* these endings. But Latin is a flexible language; "ultore" could be at a different position. So, what do we do when we want to allow for this? Quite simply, add a plus sign in front of the second word. Search for this:

gladio +ultore

Amanuensis V1.4

Search | About

 Si quis ex familiaribus vel ex servis cuiuslibet domus cuiuscumque + criminis

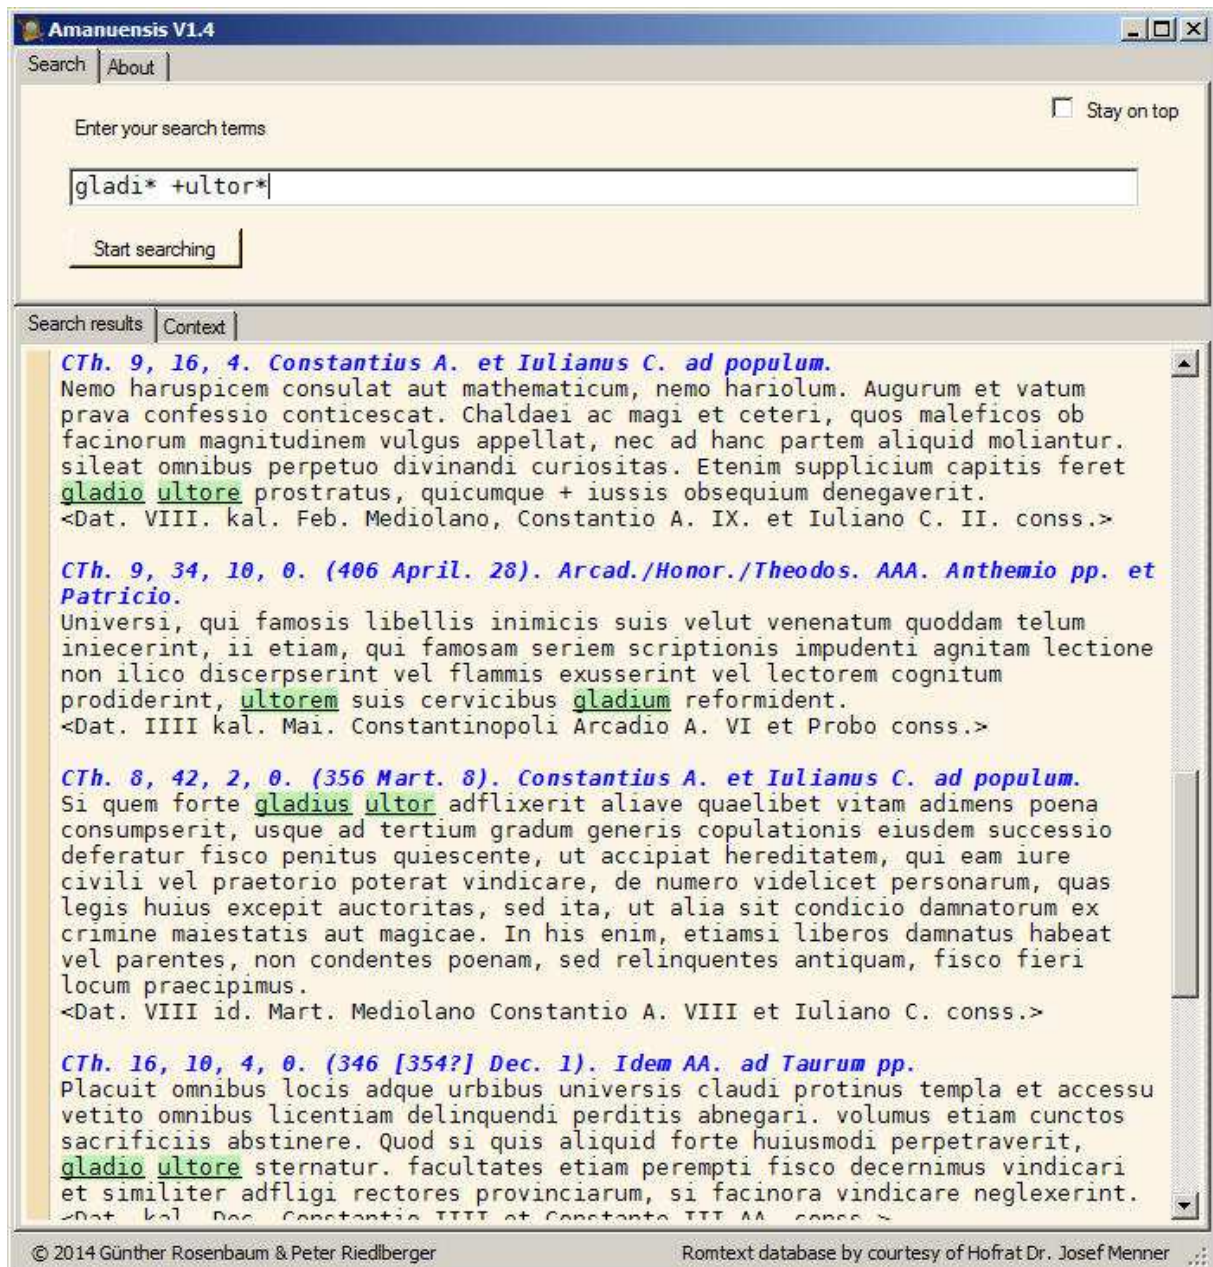

© 2014 Günther Rosenbaum & Peter Riedlberger Romtext database by courtesy of Hofrat Dr. Josef Menner

You see, now “ultore gladio” is found as well. Actually, the whole “paragraph” (meant in a non-technical way) is searched through, so theoretically, in a long paragraph, there might be “ultore” in the first phrase and three sentences later “gladio.” In practice, this is not much of a problem, especially as the green highlighting enables you to detect such false positives at a glance.

8 Further refining the search: wildcard for endings

Latin is also quite flexible when it comes to endings, and therefore we have included a wildcard, the usual asterisk. So, to further refine our search, let’s try this one:

gladi* +ultor*

And indeed, we've thus stumbled across "gladius ultor" and "ultorem ... gladium".

9 Advanced combinations of operators

You can use as many search terms as you want. Maybe you start by searching for

gladi* +ultor*

Then you take an interest in the idea of "sternere" people with the aforesaid device. Thus you search for

gladio* +ultor* +stern*

Good Latinist that you are, you remember that different stems of this verb look differently, hence you search for:

```
gladio* +ultor* +strat*
```

Oops, no hits at all. But wait, there are compounds of “sternere” which might occur. Luckily, Amanuensis supports the asterisk wildcard in any position, hence also in front position:

```
gladio* +ultor* +*strat*
```

Indeed, in this way we find “gladio ultore prostratus”. Hopefully the basic idea of how searching with Amanuensis works is clear by now.

Finally, the asterisk wildcard can be used in any position, not just at the start or the end of a word. This might be useful in cases of words with varying orthography, such as “plaustrum” and/or “plostrum”. A search for

```
pl*str*
```

catches both. Note however that you do NOT need this option for cases of prefix assimilation, e.g. “inlatus”/“illatus”, because Amanuensis takes care of this automatically (see no. 11 below).

There is also another option available, though I doubt that most users will ever need this one:

```
gladi* +ultor* prost*
```

finds any combination of “gladi...” and “ultor... prost...”. Note that here, “ultor...” and “prost...” have to be in direct sequence. If you add a plus to “prost*”, this word could be at any position in the “paragraph,” which makes a lot more sense in most cases.

Another operator is the minus sign. Passages which include the word marked with minus will *not* be displayed. This is a feature most users won’t need often, but it can be very useful in some situations. Thus, for example,

```
gall* -aquil*
```

is useful if you’re interested in Gauls, rather than in the jurist Aquilius Gallus.

10 Ignored characters

The following characters are ignored in searches: comma (,), period (.), semicolon (;), colon (:), quote (“) and blank (). This means that

```
ea quae
```

will find both “ea quae” and “ea, quae”.

11 Prefix assimilation

As you know, prefix assimilation in Latin is not mandatory, though possible. For instance, both “conpetere” and “competere” may occur. As a rule of thumb, Romtext normalizes Latin orthography according to Heumann-Seckel, i.e., applying assimilation, even if the employed edition uses a different policy. However, this task has not been carried out consistently. In earlier installments of Amanuensis, one had to search for both alternatives, e.g., “conp*” as well as “comp*” (or use a complex search, i.e. “co*p”).

Now, prefix assimilation (at least regarding ab, ad, cum, ex, in, ob, sub; I hope I haven’t forgot any others ...) is *automatically* taken care of. Hence, searching for, e.g., “summersus” will find both “submersus” and “summersus”; one could also search for “submersus” and find both.

12 Automatic handling of *-que* and *-ve*

The enclitics *-que* and *-ve* can be attached to almost any Latin word. Amanuensis is clever enough to ignore them. For example, if you search for “ius +facultas”, you would theoretically be able to find both “facultas iusque” as well as “facultas et ius” (the latter however is unattested).

13 Getting the context

One of the first things I learned when I was inculcated with the rudiments of German Civil Law was that you invariably have to throw a glance both at the immediately preceding and the immediately following paragraphs. My guess is that the same holds true for Roman Law, hence we’ve included a nifty option for seeing the context.

Whenever you see your search result, simply double-click the “paragraph” you’re interested in. This takes you to the context pane where you see this “paragraph” in its context. You can get back by clicking the “search result” tab, by double-clicking in the context pane or, if you have a decent mouse (and use the Windows version of Amanuensis), by clicking the “back button” (if you don’t know what a “back button” is, don’t worry, simply double-click instead).

14 Searching for a passage

You can also use Amanuensis for accessing your sources. Imagine you need the text of Digests, Book 39, Title 2, and you are too lazy to stand up and walk to the bookshelf; further, you wish to paste it into a document, so having the text digitally would be quite handy. For this purpose, simply search for the passage in question, using the abbreviations as explained above in no. 5. Separate the numbers using commas. Blanks, commas and periods are ignored, so it’s your choice if you use them or not. For example, in order to see Digests, Book 39, Title 2, search for:

D. 39 , 2

or

D. 39 , 2

or even

D 39 2

15 Additional features

- It goes without saying that you can copy and paste texts from Amanuensis. Just highlight them with your mouse, and then either use [CTRL+C] or, if you are a mousy kind of person, the context menu.
- Speaking of copy/paste, we've found it very useful to have Amanuensis permanently on top when doing a lot of work in a text processing application (otherwise it would disappear to the background when you continue your work on the document). To activate this, simply check "Stay on top" at the upper right corner.
- If you don't like the font size, you can zoom in and out by using the plus and minus keys with CTRL, viz. [CTRL++] and [CTRL+-]. Note that these must be the keys of the numeric keypad. Using [CTRL+0], you can get back to the default font size. This time, however, you need to use the zero key of the main keyboard. Obviously, the keys only work if the textbox has focus (meaning you have clicked into it). If all of this seems rather unintuitive to you, you can accomplish all of these actions by using the context menu (i.e., right-clicking and choosing the appropriate entry).
- At the top, there's an "about" tab. Here you can switch to another interface language, though if you made it this far, I guess you feel rather comfortable with English!
- In the Windows version of Amanuensis, you will also find an option to change the typeface in the "about" tab. The default is the remarkably beautiful font "DejaVu Sans Mono," but you are free to change to the rather peculiar font "Ubuntu Mono" (in that case, you might find it useful to adjust the zoom factor). Using the Mac version, you're more flexible when it comes to fonts, because you may simply change your system font to any font.

16 Final remarks

If you detect any errors (especially in the capitalization) or if you have ideas for additional functionality that might be implemented relatively painlessly (be reasonable, Amanuensis is freeware after all!), please contact us. Furthermore, if you like the program and use it, you might as well just drop me an e-mail. A happy Amanuensis user somewhere on the globe who sends me a nice e-mail might just make my day! The contact address is peter@riedlberger.de.

17 Version history

15 March 2015

V1.5.2

- Slight revision of the instructions; the Amanuensis binaries are unchanged.

4 December 2014

V1.5

- Some minor mistakes in Romtext removed
- Hungarian and Polish localization added

20 July 2014

V1.4

- Enhancement of Romtext continues (all Greek passages now in polytonic Greek; CTh., Nov. and Brev. passages now also show inscription in blue; minor mistakes removed)
- Codex Theodosianus is now abbreviated as CTh.
- Search terms are found even if –que or –ve is attached to them (e.g., *ius* also finds *iusque*)

6 June 2014

V1.3

- Enhancement of Romtext continues (most Greek transliterated texts now replaced by polytonic Greek; catenae now start with lower case letters; numerous minor mistakes removed)
- Minus operator added
- Prefix assimilation automatically taken into account (e.g., *illatus* automatically finds both *inlatus* and *illatus*)

1 May 2014

V1.2

- New version of Romtext database with capitalization
- Partial change of Greek transliterated texts to Greek with polytonic Greek font
- New fonts included, with an option to change the display font

13 April 2014

V1.1

- Commas etc. are ignored
- Slicker display of source references (no dollar signs, capitalization, standard abbreviations)

20 March 2014

V1.0

- First release version
